

## Blue Sky<sup>SM</sup> Block Product Content Label

Rocky Mountain Power's Blue Sky Block renewable energy program focuses on supporting regionally-supplied, newly-developed wind energy to match customer purchases. The product is sold in blocks of 100 kilowatt-hours (kwh). The product is made up of the following resources and supports new renewable energy.

Eligible renewable energy source	Blue Sky Block product	Generation location
Wind	100%	OR, WA, MT
Solar	0%	
Geothermal energy	0%	
Certified low impact hydroelectric	0%	
Hydrogen derived from photovoltaic electrolysis or a non-hydrocarbon derivation process	0%	
Wave or tidal action	0%	
Low emissions biomass	0%	
<b>Total</b>	<b>100%</b>	

These figures reflect the actual renewable energy we have contracted to purchase as of February 2008. Generation location sources can vary according to resource availability. We will annually report to you the actual resource mix of the renewable energy you purchased during the preceding year.

New renewables come from generation facilities that first began commercial operation on or after January 28, 2000.

For comparison purposes, in 2007 the current average mix of energy sources supplying Rocky Mountain Power customers is 55% coal, 8.7% wind, 13.5% hydro, 0.3% biomass, 22.3% natural gas, 0.3% other.

The average Rocky Mountain Power home uses 817 kwh per month.
