

Docket No. 20000-633-ER-23  
Witness: Nikki L. Kobliha

BEFORE THE WYOMING PUBLIC SERVICE  
COMMISSION

ROCKY MOUNTAIN POWER

---

Rebuttal Testimony of Nikki L. Kobliha

September 2023

1 **Q. Are you the same Nikki L. Kobliha who previously submitted direct testimony in**  
2 **this proceeding on behalf of PacifiCorp d/b/a Rocky Mountain Power**  
3 **(“PacifiCorp” or the “Company”)?**

4 A. Yes, I am.

5 **I. PURPOSE AND SUMMARY OF TESTIMONY**

6 **Q. What is the purpose of your rebuttal testimony?**

7 A. I will respond to certain issues raised by intervening parties in their direct testimony  
8 filed with the Wyoming Public Service Commission (“Commission”) on August 14,  
9 2023. Specifically, I respond to the testimonies of Mr. David J. Garrett sponsored by  
10 the Wyoming Industrial Energy Consumers (“WIEC”) and Mr. Christopher C. Walters  
11 on behalf of the Wyoming Office of Consumer Advocate (“WOCA”). I will also update  
12 the Company’s proposed cost of capital.

13 **Q. Please explain how your testimony is organized and the issues you will address in**  
14 **your rebuttal testimony.**

15 A. I will comment on the following issues and recommendations and explain why my  
16 analysis continues to support the capital structure proposed in my direct testimony.

17 1. In Section II, I update the Commission with the cost of capital reflecting the  
18 May 2023 debt issuance and an interest rate update for the projected 2024 long-  
19 term debt issuances.

20 2. In Section III, I respond to the recommendations by WIEC witness Mr. David  
21 J. Garrett and observations made by WOCA witness Mr. Christopher C. Walters  
22 on the Company’s proposed capital structure.

**II. UPDATED COST OF CAPITAL**

**Q. Please discuss the recent financing work that the Company has completed.**

A. During May 2023, the Company completed the issuance of a new series of long-term debt, \$1.2 billion of 5.50 percent first mortgage bonds due May 2054. This issuance of new long-term debt was included as pro-forma issuances in my direct testimony cost of debt exhibit (RMP Exhibit 3.2), and I have now updated it with the actual principal amount, terms, interest rate, yield discount and related actual and estimated issuance costs.

**Q. Does the Company currently anticipate further long-term debt issuances through the end of 2024 test period?**

A. The Company is still evaluating its financing needs for 2024. My direct testimony indicated an additional \$1.7 billion of new long-term debt would be issued during 2024, split between 10-year and 30-year issuances occurring in January and July. While the amount, timing and tenor of these issuances have not changed, I have updated the cost of debt using current forward treasury rates and indicative credit spreads provided by PacifiCorp's relationship bank on July 10, 2023.

**Q. What is the new cost of debt?**

A. As shown in RMP Exhibit 3.8, the net impact from these changes described above, plus an update to the variable-rate Pollution Control Revenue Bond rates using more recent forward market rates, results in a weighted average cost of debt of 5.09 percent, which is 32 basis points higher than the 4.77 percent projected in my direct testimony.

1 **Q. Are you currently recommending an update to the percentage capital structure**  
 2 **recommendation in your direct testimony for PacifiCorp?**

3 A. No change is proposed. Updating the capital structure to include the May 2023 bond  
 4 issuance and maintaining the same 2024 issuances as included in my direct testimony,  
 5 coupled with a reduction in the projected 2023 dividend, results in a slightly higher  
 6 equity component of the capital structure than included in my direct testimony. As a  
 7 result I am still recommending a 51.27 percent equity level.

8 **Q. What overall cost of capital do you recommend for PacifiCorp?**

9 A. I am recommending an overall cost of capital of 7.60 percent. This cost includes the  
 10 return on equity recommendation of 10.00 percent, supported by the rebuttal testimony  
 11 of Company witness Ms. Ann E. Bulkey, and the capital structure and costs are shown  
 12 in Table 1.

13 **Table 1: Overall Cost of Capital**

Component	% of Total	Cost %	Weighted Ave Cost %
Long-Term Debt	48.72%	5.09%	2.48%
Preferred Stock	0.01%	6.75%	0.00%
Common Stock Equity	<u>51.27%</u>	10.00%	<u>5.12%</u>
	100.00%		7.60%

14 **III. CAPITAL STRUCTURE**

15 **Q. Please summarize Mr. Garrett's capital structure proposal.**

16 A. Mr. Garrett proposes a significant change in the Company's proposed equity ratio  
 17 reducing it to 46.11 percent.<sup>1</sup> Mr. Garrett provides no evidence as to why such a thin  
 18 equity level is reasonable other than to make inaccurate proxy group and irrelevant

<sup>1</sup> Direct Testimony of David J. Garret at 10 (WIEC Exhibit No. 201).

1 other competitive industries' comparisons. Mr. Garrett further purports that the rate  
2 base model does not incentivize utilities to operate at the optimal capital structure,<sup>2</sup>  
3 that credit ratings are primarily a concern of management and that maintaining a strong  
4 credit rating will not benefit ratepayers if it comes at a higher weighted average cost of  
5 capital.<sup>3</sup> I disagree with all these points as further explained below.

6 **Q. Mr. Garrett concludes the average debt ratio of the proxy group found in RMP**  
7 **Exhibit 4.11 of Ms. Bulkley's testimony is 54 percent<sup>4</sup> and Mr. Walters concludes**  
8 **the average equity ratio is 45.5 percent (excluding short-term debt).<sup>5</sup> Do you agree**  
9 **with these observations?**

10 A. No. Mr. Garrett provides a table of Proxy Company Debt Ratios in WIEC Exhibit  
11 No. 201.17 and Mr. Walters provides a table of Proxy Group data including equity  
12 ratios in WOCA Exhibit No. 602.3. Both sets of data are different than that provided  
13 by the Company in RMP Exhibit 4.11 for two reasons. First, the source for Mr. Garrett's  
14 proxy company debt ratios table and Mr. Walters proxy group common ratios tables is  
15 a Value Line Investment Survey. Value Line only reports ratios at the parent company,  
16 or holding company, level and not at the utility operating company level. The  
17 Company's exhibit is presented at the utility operating company level which provides  
18 a more direct comparison of the Company to its peers. Second, Mr. Garrett's data uses  
19 year end 2022 actual debt ratios<sup>6</sup> and Mr. Walters uses data from the months of April,  
20 May and June 2023 while the Company presented eight quarters of historical common

---

<sup>2</sup> *Id.*, at 60.

<sup>3</sup> *Id.*, at 68-70.

<sup>4</sup> *Id.*, at 62.

<sup>5</sup> Direct Testimony of Christopher C. Walters at 30 (WOCA Exhibit No. 602).

<sup>6</sup> Many of Mr. Garrett's exhibits focus on debt ratio side of the calculation while the Company's support focuses on the equity ratio.

1 equity ratio data and the resulting average of all quarters presented. Looking at several  
2 data points and compiling an average smooths out peaks and valleys that occur in debt  
3 or equity ratios due to timing of debt issuances, equity issuances or dividend payments.  
4 The Company considers this variability when setting the common equity level proposed  
5 in its rate cases by using an average of the five quarter-ending balances spanning the  
6 test period. Using the eight-quarter average in RMP Exhibit 4.11 the low, high and  
7 mean common equity ratios are 45.95 percent, 61.06 percent and 53.18 percent,  
8 respectively, placing the Company's request within a reasonable range when compared  
9 to the proxy group.

10 **Q. Mr. Garrett bases his capital structure recommendation partly on the debt ratios**  
11 **of competitive industries. Does the review of these companies have any relevance**  
12 **to the appropriate capital structure for the Company?**

13 A. No. First, Mr. Garrett's position ignores a key factor that influences financing practices  
14 of utility companies when compared to the majority of other industries: its regulatory  
15 environment. Due to a utility company's obligation to serve, they generally do not have  
16 the option to defer large capital investments as non-regulated companies do. This  
17 means utilities such as PacifiCorp must have continued access to capital markets even  
18 in times of market volatility or turmoil. This on its own is a significant difference that  
19 needs to be considered with evaluating leverage ratios. Mr. Garrett's reference to the  
20 Green & Renewable Energy companies as a relevant comparison differs as these  
21 companies are not rate regulated and therefore do not finance their operations in a  
22 manner similar to utility operating companies.

1           Second, Mr. Garrett observes that nearly 2,000 firms in United States (“U.S.”)  
2 industries have higher debt ratios than requested by the Company in this case, making  
3 the Company’s debt ratio seem out of the ordinary. What Mr. Garrett does not provide  
4 is the remaining 4,800-plus firms in U.S. industries that have an average debt ratio that  
5 is equal to or less than the level requested by the Company in this case. Considering  
6 this larger population places the Company in the 42nd percentile of the group.<sup>7</sup>

7 **Q. Do you agree with Mr. Garrett’s assertion that utilities have no incentive to**  
8 **minimize their cost of capital?**<sup>8</sup>

9 A. I do not want to speak for all utilities but will instead provide a perspective on the  
10 Company. The Company strives to minimize its cost of capital and keep all other costs  
11 at the lowest level possible that still enables it to provide safe and reliable power to its  
12 customers at reasonable rates. The Company’s proposed capital structure is the most  
13 cost-effective approach to maintain a solid credit rating enabling the Company to raise  
14 capital at a reasonable cost, which directly benefits customers.

15 **Q. Mr. Garrett says ratings are only a concern of management, and will not benefit**  
16 **customers if it comes at a higher weighted average cost of capital (“WACC”).<sup>9</sup>**  
17 **Can you explain why ratings are important to more than just management?**

18 A. A company’s credit rating is a key consideration when assessing its financial strength  
19 and allows for consistent access and at reasonable rates to capital markets. The financial  
20 strength of the Company allows it to attract capital at reasonable rates to support  
21 operations and investments in various market conditions both good and bad. Having

<sup>7</sup> [http://people.stern.nyu.edu/adamodar/New\\_Home\\_Page/datacurrent.html](http://people.stern.nyu.edu/adamodar/New_Home_Page/datacurrent.html)

<sup>8</sup> Direct Testimony of David J. Garrett at 60 (WIEC Exhibit No. 201).

<sup>9</sup> *Id.*, at 68.

1 consistent access to capital markets during unanticipated economic events that cause  
2 market volatility, which are outside of the control of the Company, is a benefit to  
3 customers to obtain the most competitive rates possible. For example, during the  
4 COVID-19 pandemic and the Great Recession, the Company had consistent access to  
5 capital markets, which allowed us to continue to provide safe, reliable service for  
6 customers at competitive rates. Having credit metrics on the threshold of a downgrade  
7 or below investment grade leaves the Company no flexibility to respond to unexpected  
8 economic events. Hence, ratings are a concern to more than just management.

9 Mr. Garrett takes a mathematical approach to customer benefits rather than a  
10 more holistic and balanced view of how the financial health of the utility provides a  
11 significant benefit to customers. The Company is seeking a cost-efficient capital  
12 structure targeted to maintain a solid credit rating, which enables continued access to  
13 the debt capital markets at the lowest possible cost. This is a direct benefit to customers  
14 since significant borrowings are needed to fund capital projects necessary to provide  
15 safe, reliable service to customers.

16 **Q. Does this conclude your rebuttal testimony?**

17 A. Yes.
