

Wattsmart® Business New Construction Incentives

Wattsmart Business has incentives and engineering services to help save your new construction project money!

WHAT ARE THE INCENTIVE TYPES AND VALUES?

- Typical incentives for common new construction measure types, such as: Lighting, HVAC, building envelope, controls, production equipment, compressed air, etc.
 - See incentive lists at Wattsmart.com.
- Custom incentives for non-typical measures:
 - \$0.15/kWh saved. Project caps may apply.

WHAT IS THE PROCESS?

- 1. Conceptual Design:** Complete a Wattsmart Business General Application.
- 2. Schematic Design:** Share building designs with a Wattsmart specialist for a design review. Wattsmart staff will create a Preliminary Savings and Incentive Report (PSIR) for your project.
- 3. Value Engineering:** Consider incentive values and cost savings for at-risk measures. Evaluate if energy-saving measures can be retained in designs.
- 4. Construction Documents:** Share updated designs with a Wattsmart specialist. Wattsmart staff will create a Savings and Incentive Report (SIR) and offer a Wattsmart Incentive Offer Letter for your project.
- 5. Wattsmart Incentive Offer Letter:** By signing this letter, you “lock in” incentives for your project. The offer letter includes your preferred project completion date.
- 6. Substantial Completion:** Notify Wattsmart staff that your project is complete and schedule your final inspection. Staff may need to wait until facility is occupied or production equipment is loaded to verify energy savings.
- 7. Incentive Payment:** Share required project documentation with Wattsmart specialist. Wattsmart staff will complete a final Savings Verification Report and send you an incentive check within 45 days of submission.
