**Notes for interior lighting system retrofit incentives:**

1. To be eligible for the incentives listed, the new lighting system must use less energy than the existing lighting system being replaced or the baseline lighting system as determined by Rocky Mountain Power.
2. Customers may receive incentives for qualified replacement lamps through a point of purchase incentive by purchasing from approved distributors or by submitting a post-purchase application. Please contact Rocky Mountain Power for additional information.
3. For the list of equipment with available Lighting Instant Incentives, see the Lighting Instant Incentives table. Where eligible for Lighting Instant Incentives as part of a retrofit project, Lighting Instant Incentive quantity limits do not apply.
4. Incentives are capped at 70 percent of energy efficiency project costs and will not be available to reduce the energy efficiency project simple payback below one year. Energy efficiency project costs are subject to approval by Rocky Mountain Power. Control Re-Commissioning measure only projects are subject to 100 percent cost cap of reasonable costs and are not subject to the one-year simple payback cap.
5. Eligible retrofit lighting equipment is defined in qualified equipment lists posted on the Utah energy efficiency section at [Wattsmart.com](http://Wattsmart.com).
6. Per International Energy Conservation Code 2018 (IECC 2018) and program requirements, parking garages and areas under parking decks are considered interior spaces. Top decks are considered exterior spaces.
7. Qualified make and model numbers need to be entered into lighting calculator tool.
8. The Customer or Owner may receive only one financial incentive from Rocky Mountain Power per measure. Incentives listed in the table above cannot be combined with incentives received through the point of purchase Lighting Instant Incentive offer or the Home Energy Savings program.
9. Energy savings are subject to approval and will be offered at Rocky Mountain Power's discretion. Energy Efficiency Project costs are subject to Rocky Mountain Power approval. Certain lighting technologies/upgrades have been deemed ineligible for incentives.
10. Exterior fixtures are by default considered dusk to dawn. Any other operating schedule must be documented and verified.
11. In cases where controls are required for eligibility, and there are existing controls, the new control strategy must result in higher savings than the existing controls system to qualify for incentives. This can be achieved by replacing or adding to the existing controls system.
12. To qualify for Controlled Environment Agriculture (CEA) incentives, equipment must be listed on DesignLights Consortium's horticultural lighting QPL.
13. Basic controls for Large segment customers must be networked, continuously dimming, and addressable. Addressability does not have to be on a fixture level, and no maximum zone size is defined.
14. For facilities not subject to standard code LPD allowances, a custom analysis may be performed and retrofits may be paid incentives based on savings over industry-standard systems.
  - a. Incentive offer letter may be required for projects not subject to standard code LPD allowances.
15. There is a 3-year waiting period for any control system re-commissioning that previously received an incentive as ANLC. The waiting period can be waived for anything previously classified as Basic or Networked, or if the installed lighting control system has not previously received an incentive.
