About Energy Management

Energy Management for commercial and industrial facilities helps restore the original intended operating performance of major electrical systems. It targets savings opportunities by evaluating these systems, then identifies no-cost and low-cost efficiency measures for improved performance.

Energy Management can:
- Improve system operation and lower energy costs
- Reduce maintenance and repair costs
- Extend equipment life
- Improve occupant comfort and productivity

“We One of our struggles is figuring out solutions for our complex energy use problems. Rocky Mountain Power helps with that when we commit to energy management. It allows us to get some very good efficiency from our systems.”

Brett Dimond
Facilities Foreman
O.C. Tanner

What is Energy Management?

In technical terms, energy management is a system of practices that creates reliable and persistent electric energy savings through improved operations, maintenance and management practices in your facilities.

For Rocky Mountain Power and our customers, energy management is a partnership that saves energy, time and money!

Is it one size fits all?

One size seldom fits all. That’s why Rocky Mountain Power designed energy management options that can be custom tailored to your operations, staff resources and company commitment to energy efficiency.

- **Recommissioning partnership:**
  - Single systems, i.e. “Chilled Water Loop” or “Primary Air Handlers”

- **Industrial Recommissioning partnership:**
  - Process systems, i.e. compressed air or refrigeration

- **Persistent Commissioning partnership:**
  - Comprehensive improvements over time

- **Strategic Energy Management partnership:**
  - Comprehensive whole building and/or industrial processes
  - Two participation options, cooperative or one-on-one

We partner with you to match your savings opportunities to the correct level of engagement.

What does it cost?

The energy engineering costs are covered by the wattsmart® Business program and we’ll look for no-cost/low-cost improvements that typically have a payback of less than a year. We’ll need your time, commitment, knowledge of your operations, and possibly some O&M dollars. There is also a $0.02 per verified kilowatt-hour savings cash incentive to offset some or all of your costs.

*continued*
What if I need someone to identify and implement the projects?

Energy management incentives are a perfect complement to our Energy Project Manager Co-funding offering. If you can commit to an annual goal of completing energy projects resulting in at least 1,000,000 kilowatt-hours per year in savings, we will help to pay your energy project manager’s salary. Annual co-funding is $0.025 per kwh/year for the energy savings results achieved.

Where do I sign up?

Your Rocky Mountain Power wattsmart Business project manager can provide the application and assist in identifying the right level of engagement for our energy management partnership.

Who is eligible?

Rocky Mountain Power commercial, industrial and agricultural customers in Utah with electric service on rate schedules: 6, 6A, 6B, 8, 9, 9A, 10, 12, 21, 23, 23B and supplementary service under Schedule 31.

You’ve got questions, we’ve got answers!

List of potential savings

Listed below are just some of the areas in your facility that could be using more energy than necessary. Rocky Mountain Power’s wattsmart Business program can help you save.

- Compressed air systems
- Fans
- Pumps
- Chillers
- Industrial process systems
- Refrigeration systems
- Commercial building HVAC controls
- Lighting controls
- Scheduling
- Control setpoints
- Air handlers
- Data center cooling
- Economizer functions
- Heat exchangers
